Volume Two due May 1997) will be practice orientated and will address the simulation of the numerical solutions of the Navier-Stoke equations via the finite element method. The two volumes can be used as self-teaching tutorials for students at graduate level as they include worked exercises and applications and sample results of computer simulations. They should also appeal to practising engineers working with advection-diffusion incompressible flow and incompressible FEM fluid mechanics.

### **Incompressible flow and the finite element method Volume**

Abstract. The most general description of a fluid flow is obtained from the full system of Navier-Stokes equations. These equations do not have solutions in closed form formula, so numerical techniques have to be used, amongst which the finite element method is the most used and still evolving technique.
